Angles Process Mining

Out-of-the-box process mining for SAP

Businesses are getting more and more complex. To improve your business in this environment, data that shows you how the business is running, including its hidden paths and inefficiencies is critical. People often think they know how their business is running. But can you honestly say you know how many times an order is amended before being shipped, or how many times processes are not followed by the business?

The actions people take throughout their working day while using SAP, including the automated steps in the process, can produce valuable insights. Opportunities for significant improvements in process efficiency and effectiveness can become apparent if you have the capability to combine all this data and analyze it as an end-to-end flow. All this information is stored in your IT systems, but usually remains hidden. How can you get to and use that data? With Magnitude Angles Process Mining, you can.

Process Mining

Process Mining, a proven technology used worldwide, goes far beyond traditional process analysis methods like interviews, lead time measurement, and performance analysis. It is a discipline that extracts descriptive models from event logs in SAP in order to reconstruct the underlying business process flows, providing a visualized model of the end-to-end

process, e.g., exactly how the Purchase to Pay, and Order to Cash processes are executed by your users.

With Angles Process Mining you get the desired insights into how your business is currently running. As our solution is designed with data scientists and business analysts in mind, it provides you with advanced throughput time analysis, bottleneck detection and root cause analysis. All easily visible via clear process graphs.

Another use of process mining can be found in benchmarking. Start comparing company codes to identify if a process is followed in the same way. Auditing to decrease risk in processes can also be performed with the use of process mining. Start analyzing if mandatory process steps are performed and dive into cases that don't follow the mandatory process steps with a platform full of advanced BI capabilities.

Benefits
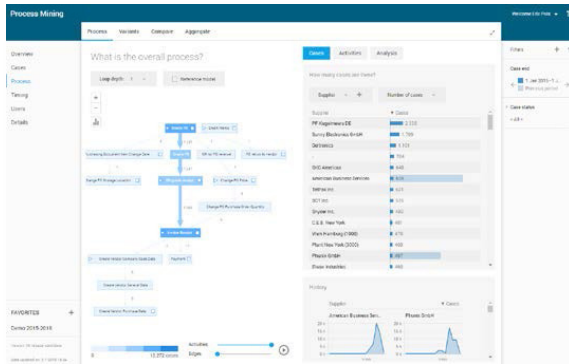

✓ **20+ years of SAP knowledge combined with out-of-the-box Process Mining.**

✓ **Three SAP data models out-of-the-box (Purchase to Pay, Supply to Demand and Order to Cash).**

✓ **Up and running in days.**

✓ **No need to purchase an extra server (installed on the same server).**

✓ **No need to waste months gathering the data first (as with other tools).**

✓ **Data refresh as often as preferred.**

✓ **Immediately start driving day-to-day improvements.**

✓ **Create action lists based on your findings and automatically schedule them daily.**

SAP® Certified
Powered by SAP NetWeaver®

**SAP**® Certified
Integration with SAP S/4HANA®

01 Visualize your process

View what is actually happening in your business process

02 Detect Bottlenecks

See throughput times between activities, and identify inefficiencies

03 Gain an overview of what's happening

Get a high level view of the number of events and activities in your process including percentage ratio

04 Drill down to the details

Find specific cases causing bottlenecks, and identify actions and improvements

With Angles Process Mining you can drive operational and tactical improvements at the same time.

Angles Process Mining delivers cross-process, self-service analytics for SAP. It empowers your organization with new levels of actionable insight - enabling you to know more and act faster. Angles Process Mining provides real understanding of what is actually going on across the business (and why), so you can act early enough to control performance and drive significant financial improvements.
